Subject Index of Volume 164

Academic materials
  modelling high temperature creep of academic and industrial materials using the composite model, 290
Acoustic emission
  the Portevin–Le Châtelier effect in Al–2.92%Mg–0.38%Mn alloy and linear location of acoustic emission, 260
Alloys
  changes of stacking fault sequences during the martensitic phase transformation in Cu–Zn–Al shape memory alloys, 443
  collective behavior and superdislocation motion in $L1_2$ alloys, 82
  dislocation structure and corduroy contrast in a 316L alloy fatigued at (0.3–0.5) T_m, 226
  high temperature deformation behavior of an Al–Fe–V–Si alloy, 216
  interaction between dislocations and precipitates in an Al–Li alloy, 332
  observations of dislocations relevant to the anomalous yield stress in $L1_2$ alloys, 395
  onset mechanisms of discontinuous flow at low temperatures in one- and two-phase Cu–Be alloys, 240
  stress corrosion microcleavage in a ductile f.c.c. alloy, 266
  the influence of dislocations on electrical resistivity anomalies in palladium alloys, 180
  the Portevin–Le Châtelier effect in Al–2.92%Mg–0.38%Mn alloy and linear location of acoustic emission, 260
  transmission electron microscope *in situ* deformation of MC2 superalloy at room temperature, 401
  work softening and Hall–Petch hardening in extruded mechanically alloyed alloys, 1
Alumina
  dislocation activity and differences between tensile and compressive creep of yttria doped alumina, 211
Aluminium
  a weak beam study of the dislocation structure in directionally solidified Ni_3Al during deformation, 384
  arrangement of misfit dislocations at Ti_3Al/TiAl phase boundaries, 421
  changes of stacking fault sequences during the martensitic phase transformation in Cu–Zn–Al shape memory alloys, 443
  dislocation core structures in the ordered intermetallic alloy TiAl, 391
  dislocation structure in $L1_2$ long-range-ordered Ni_3(Al,Ti) deformed in the temperature regime between −196 °C and 800 °C, 186
  dislocation substructures in plastically deformed AlN, 360
  high temperature deformation behavior of an Al–Fe–V–Si alloy, 216
  interaction between dislocations and precipitates in an Al–Li alloy, 332
  mechanisms of yield stress anomalies in beryllium and Ni_3Al, 69
  on the relationship between unusual mechanical properties and deformation substructures in ordered Ni_3Al, 379
  plastic deformation of single glide oriented Cu–2 to 15at.%Al crystals at elevated temperatures, 235
  structure and mobility of the polygonized dislocation walls in high purity aluminium, 153
  the Portevin–Le Châtelier effect in Al–2.92%Mg–0.38%Mn alloy and linear location of acoustic emission, 260
  twin propagation in TiAl, 438
Athermal yielding
  comparison between simulation calculations and measurements concerning athermal yielding of precipitation hardening of Cu–Co single crystals, 340
Austenite
  on the effect of nitrogen on the dislocation structure of austenitic stainless steel, 164

Beryllium
  mechanisms of yield stress anomalies in beryllium and Ni_3Al, 69
  onset mechanisms of discontinuous flow at low temperatures in one- and two-phase Cu–Be alloys, 240
Brittle-to-ductile transitions
  dislocation dynamics and brittle-to-ductile transitions, 135

Cadmium
  the influence of Peierls relief on low-temperature plasticity of CdTe single crystals, 364
Carbon
  effect of precipitation on the development of dislocation substructure in low carbon steels during cold deformation, 201
Cell structures
  dislocation cell structures in copper in torsion and tension, 170
  investigation of the formation of dislocation cell structures and the strain hardening of metals by computer simulation, 300
Ceramics
  deformation, structure and properties of ceramics and crystals of high-T_c superconductors, 146
Cobalt
  comparison between simulation calculations and measurements concerning athermal yielding of precipitation hardening of Cu–Co single crystals, 340
Composites
  modelling high temperature creep of academic and industrial materials using the composite model, 290
Computer modelling
  interactions between lattice dislocations and grain boundaries in $L1_2$ ordered compounds investigated by *in situ* transmission electron microscopy and computer modelling experiments, 415
Computer simulations
  investigation of the formation of dislocation cell structures and the strain hardening of metals by computer simulation, 300
  role of the secondary slip system in a computer simulation model of the plastic behaviour of single crystals, 306

Copper
changes of stacking fault sequences during the martensitic phase transformation in Cu–Zn–Al shape memory alloys, 443
comparison between simulation calculations and measurements concerning athermal yielding of precipitation hardening of Cu–Co single crystals, 340
dislocation cell structures in copper in torsion and tension, 170
on sequences of stable and unstable regions of flow along stress–strain curves of solid solutions—experiments on Cu–Mn polycrystals, 230
onset mechanisms of discontinuous flow at low temperatures in one- and two-phase Cu–Be alloys, 240
plastic deformation of single glide oriented Cu–2 to 15at.%Al crystals at elevated temperatures, 235
transformation of dislocation patterns in fatigued copper single crystals, 206
Corduroy contrast
dislocation structure and corduroy contrast in a 316L alloy fatigued at (0.3–0.5) T_m, 226
Core structures
dislocation core structures in the ordered intermetallic alloy TiAl, 391
Corrosion
stress corrosion microcleavage in a ductile f.c.c. alloy, 266
Cracking
dislocation loops at crack tips: nucleation and growth—an experimental study in silicon, 118
dislocation-controlled stable crack growth in Mo and MgO, 270
Creep
dislocation activity and differences between tensile and compressive creep of yttria doped alumina, 211
modelling high temperature creep of academic and industrial materials using the composite model, 290
Cross slip
calculation of cross-slip parameters in f.c.c. crystals, 286
Crystals
calculation of cross-slip parameters in f.c.c. crystals, 286
comparison between simulation calculations and measurements concerning athermal yielding of precipitation hardening of Cu–Co single crystals, 340
deformation, structure and properties of ceramics and crystals of high-T_c superconductors, 146
effects of magnetic fields on the dislocation unlocking from paramagnetic centers in non-magnetic crystals, 322
hardening and softening in Zr–Sn crystals, 246
low-temperature dislocation internal friction in crystals, 312
mechanisms of dislocation motion and multiplication in ionic and semiconductor crystals, 356
plastic deformation of single glide oriented Cu–2 to 15at.%Al crystals at elevated temperatures, 235
role of the secondary slip system in a computer simulation model of the plastic behaviour of single crystals, 306
substructure of dislocations in the (111) plane in Ni_3Ga single crystals, 407
the influence of Peierls relief on low-temperature plasticity of CdTe single crystals, 364
transformation of dislocation patterns in fatigued copper single crystals, 206

Damping
a dislocation model for internal damping due to the thermal expansion mismatch between matrix and particles in microheterogeneous materials, 327
Defects
misfit dislocations and other defects in thin films, 433
Deformation
a weak beam study of the dislocation structure in directionally solidified Ni_3Al during deformation, 384
deformation mechanisms of a ferritic–martensitic steel between 290 and 870 K, 159
deformation, structure and properties of ceramics and crystals of high-T_c superconductors, 146
dislocation structure in $L1_2$ long-range-ordered $Ni_3(Al,Ti)$ deformed in the temperature regime between −196 °C and 800 °C, 186
dislocation-associated elastic energy storage in mechanical deformations, 220
effect of precipitation on the development of dislocation substructure in low carbon steels during cold deformation, 201
heterogeneous dislocation loop nucleation and free surface effects on plastic deformation: an *in situ* transmission electron microscopy study, 196
high temperature deformation behavior of an Al–Fe–V–Si alloy, 216
low-temperature abrupt deformation processes in metals: kinetic and statistical properties observed by means of electronic response, 252
on the dynamic origin of dislocation structures in deformed solids, 15
on the relationship between unusual mechanical properties and deformation substructures in ordered Ni_3Al, 379
plastic deformation of single glide oriented Cu–2 to 15at.%Al crystals at elevated temperatures, 235
rheological behaviour of mild steel under monotonic loading conditions and cross-loading, 255
transmission electron microscope *in situ* deformation of MC2 superalloy at room temperature, 401
Diffusion
evolution of dislocation structure on the interfaces associated with diffusionless phase transitions, 111
Directional solidification
a weak beam study of the dislocation structure in directionally solidified Ni_3Al during deformation, 384
Disclination configurations
screened disclinations in solids, 58
Discontinuous flow
onset mechanisms of discontinuous flow at low temperatures in one- and two-phase Cu–Be alloys, 240
Dislocation
a dislocation model for internal damping due to the thermal expansion mismatch between matrix and particles in microheterogeneous materials, 327
a method for simulating electron microscope dislocation images, 373
a weak beam study of the dislocation structure in directionally solidified Ni_3Al during deformation, 384
arrangement of misfit dislocations at Ti_3Al/TiAl phase boundaries, 421
collective behavior and superdislocation motion in $L1_2$ alloys, 82
dislocation activity and differences between tensile and compressive creep of yttria doped alumina, 211
dislocation and kink dynamics in f.c.c. metals studied by mechanical spectroscopy, 42
dislocation cell structures in copper in torsion and tension, 170
dislocation core structures in the ordered intermetallic allloy TiAl, 391

dislocation distributions as seen by X-ray line profiles, 175
dislocation dynamics and brittle-to-ductile transitions, 135
dislocation loops at crack tips: nucleation and growth—an experimental study in silicon, 118
dislocation structure and corduroy contrast in a 316L alloy fatigued at (0.3–0.5) T_m, 226
dislocation structure in $L1_2$ long-range-ordered $Ni_3(Al,Ti)$ deformed in the temperature regime between −196 °C and 800 °C, 186
dislocation substructures in plastically deformed AlN, 360
dislocation-associated elastic energy storage in mechanical deformations, 220
dislocation-controlled stable crack growth in Mo and MgO, 270
dislocation-point defects interaction in semiconductors and kink mobility, 346
dynamic recovery of the microstructure of screw dislocations in high purity b.c.c. metals, 191
dynamical model of the wall structure in persistent slip bands of fatigued metals
I. Dynamical model of edge dislocation walls, 295
effect of precipitation on the development of dislocation substructure in low carbon steels during cold deformation, 201
effects of magnetic fields on the dislocation unlocking from paramagnetic centers in non-magnetic crystals, 322
evolution of dislocation structure on the interfaces associated with diffusionless phase transitions, 111
heterogeneous dislocation loop nucleation and free surface effects on plastic deformation: an *in situ* transmission electron microscopy study, 196
image forces on dislocations: the elastic modulus effect, 428
interaction between dislocations and precipitates in an Al–Li alloy, 332
interactions between lattice dislocations and grain boundaries in $L1_2$ ordered compounds investigated by *in situ* transmission electron microscopy and computer modelling experiments, 415
internal stresses and scaling laws, 141
investigation of the formation of dislocation cell structures and the strain hardening of metals by computer simulation, 300
low-energy dislocations and ductility of ferritic steels, 275
low-temperature dislocation internal friction in crystals, 312
mechanisms of dislocation motion and multiplication in ionic and semiconductor crystals, 356
misfit dislocation generation mechanisms in heterostructures, 101
misfit dislocations and other defects in thin films, 433
observations of dislocations relevant to the anomalous yield stress in $L1_2$ alloys, 395
on the dynamic origin of dislocation structures in deformed solids, 15
on the effect of nitrogen on the dislocation structure of austenitic stainless steel, 164
structure and characterization of the dislocations in tilt grain boundaries between $\Sigma = 1$ and $\Sigma = 3$: a high resolution electron microscopy study, 93
structure and mobility of the polygonized dislocation walls in high purity aluminium, 153
substructure of dislocations in the (111) plane in Ni_3Ga single crystals, 407
the influence of dislocations on electrical resistivity anomalies in palladium alloys, 180
the stress fields of edge dislocation near wedge-shaped boundaries and bonded wedges, 411
transformation of dislocation patterns in fatigued copper single crystals, 206
ultrasonic study of the interaction potential between a dislocation and a single solute atom, 316

Ductility
low-energy dislocations and ductility of ferritic steels, 275

Dynamical models
dynamical model of the wall structure in persistent slip bands of fatigued metals
I. Dynamical model of edge dislocation walls, 295

Elasticity
dislocation-associated elastic energy storage in mechanical deformations, 220
image forces on dislocations: the elastic modulus effect, 428

Electrical resistivity
the influence of dislocations on electrical resistivity anomalies in palladium alloys, 180

Electron microscopy
a method for simulating electron microscope dislocation images, 373

Electronic response
low-temperature abrupt deformation processes in metals: kinetic and statistical properties observed by means of electronic response, 252

Energy storage
dislocation-associated elastic energy storage in mechanical deformations, 220

F.c.c. metals
dislocation and kink dynamics in f.c.c. metals studied by mechanical spectroscopy, 42

Fatigue
dislocation structure and corduroy contrast in a 316L alloy fatigued at (0.3–0.5) T_m, 226
dynamical model of the wall structure in persistent slip bands of fatigued metals
I. Dynamical model of edge dislocation walls, 295
transformation of dislocation patterns in fatigued copper single crystals, 206

Ferrite
deformation mechanisms of a ferritic–martensitic steel between 290 and 870 K, 159
low-energy dislocations and ductility of ferritic steels, 275

Flow stress
the peak of flow stress in the $L1_2$ structure and the elimination of Kear–Wilsdorf locks, 281

Fracture
plastic instabilities and their relation to fracture, 35

Free surface effects
heterogeneous dislocation loop nucleation and free surface effects on plastic deformation: an *in situ* transmission electron microscopy study, 196

Friction
a new internal friction peak and the problem of the Peierls potential in f.c.c. metals, 368
low-temperature dislocation internal friction in crystals, 312

Gallium
substructure of dislocations in the (111) plane in Ni_3Ga single crystals, 407

Generation mechanisms
misfit dislocation generation mechanisms in heterostructures, 101

Grain boundaries
interactions between lattice dislocations and grain boundaries in $L1_2$ ordered compounds investigated by *in situ* transmission electron microscopy and computer modelling experiments, 415
structure and characterization of the dislocations in tilt grain boundaries between $\Sigma = 1$ and $\Sigma = 3$: a high resolution electron microscopy study, 93

Hall–Petch hardening
work softening and Hall–Petch hardening in extruded mechanically alloyed alloys, 1
Heterostructures
misfit dislocation generation mechanisms in heterostructures, 101
High resolution electron microscopy
structure and characterization of the dislocations in tilt grain boundaries between $\Sigma = 1$ and $\Sigma = 3$: a high resolution electron microscopy study, 93

Industrial materials
modelling high temperature creep of academic and industrial materials using the composite model, 290
Interaction potential
ultrasonic study of the interaction potential between a dislocation and a single solute atom, 316
Interfaces
evolution of dislocation structure on the interfaces associated with diffusionless phase transitions, 111
Intermetallics
dislocation core structures in the ordered intermetallic alloy TiAl, 391
Iron
high temperature deformation behavior of an Al–Fe–V–Si alloy, 216
softening of α-iron by solute nitrogen atoms investigated between 30 and 300 K by use of stress-relaxation measurements, 350

Kear–Wilsdorf locks
the peak of flow stress in the $L1_2$ structure and the elimination of Kear–Wilsdorf locks, 281
Kinetic properties
low-temperature abrupt deformation process in metals: kinetic and statistical properties observed by means of electronic response, 252
Kink dynamics
dislocation and kink dynamics in f.c.c. metals studied by mechanical spectroscopy, 42
Kink mobility
dislocation-point defects interaction in semiconductors and kink mobility, 346

$L1_2$ alloys
collective behavior and superdislocation motion in $L1_2$ alloys, 82
interactions between lattice dislocations and grain boundaries in $L1_2$ ordered compounds investigated by *in situ* transmission electron microscopy and computer modelling experiments, 415
observations of dislocations relevant to the anomalous yield stress in $L1_2$ alloys, 395
the peak of flow stress in the $L1_2$ structure and the elimination of Kear–Wilsdorf locks, 281
Lithium
interaction between dislocations and precipitates in an Al–Li alloy, 332
Loading conditions
rheological behaviour of mild steel under monotonic loading conditions and cross-loading, 255
Loop nucleation
heterogeneous dislocation loop nucleation and free surface effects on plastic deformation: an *in situ* transmission electron microscopy study, 196

Magnesium
dislocation-controlled stable crack growth in Mo and MgO, 270
the Portevin–Le Châtelier effect in Al–2.92%Mg–0.38%Mn alloy and linear location of acoustic emission, 260
Magnetic fields
effects of magnetic fields on the dislocation unlocking from paramagnetic centers in non-magnetic crystals, 322
Manganese
on sequences of stable and unstable regions of flow along stress–strain curves of solid solutions—experiments on Cu–Mn polycrystals, 230
the Portevin–Le Châtelier effect in Al–2.92%Mg–0.38%Mn alloy and linear location of acoustic emission, 260
Martensite
deformation mechanisms of a ferritic–martensitic steel between 290 and 870 K, 159
Mechanical alloying
work softening and Hall–Petch hardening in extruded mechanically alloyed alloys, 1
Mechanical properties
on the relationship between unusual mechanical properties and deformation substructures in ordered Ni_3Al, 379
Mechanical spectroscopy
dislocation and kink dynamics in f.c.c. metals studied by mechanical spectroscopy, 42
Metals
a new internal friction peak and the problem on the Peierls potential in f.c.c. metals, 368
dynamic recovery of the microstructure of screw dislocations in high purity b.c.c. metals, 191
dynamical model of the wall structure in persistent slip bands of fatigued metals
I. Dynamical model of edge dislocation walls, 295
investigation of the formation of dislocation cell structures and the strain hardening of metals by computer simulation, 300
low-temperature abrupt deformation processes in metals: kinetic and statistical properties observed by means of electronic response, 252
Microcleavage
stress corrosion microcleavage in a ductile f.c.c. alloy, 266
Microheterogeneous materials
a dislocation model for internal damping due to the thermal expansion mismatch between matrix and particles in microheterogeneous materials, 327
Microstructure
dynamic recovery of the microstructure of screw dislocations in high purity b.c.c. metals, 191
Molybdenum
dislocation-controlled stable crack growth in Mo and MgO, 270

Nickel
a weak beam study of the dislocation structure in directionally solidified Ni_3Al during deformation, 384

dislocation structure in $L1_2$ long-range-ordered $Ni_3(Al,Ti)$ deformed in the temperature regime between −196 °C and 800 °C, 186
mechanisms of yield stress anomalies in beryllium and Ni_3Al, 69
on the relationship between unusual mechanical properties and deformation substructures in ordered Ni_3Al, 379
substructure of dislocations in the (111) plane in Ni_3Ga single crystals, 407
Nitrogen
dislocation substructures in plastically deformed AlN, 360
on the effect of nitrogen on the dislocation structure of austenitic stainless steel, 164
softening of α-iron by solute nitrogen atoms investigated between 30 and 300 K by use of stress-relaxation measurements, 350
Nucleation
dislocation loops at crack tips: nucleation and growth—an experimental study in silicon, 118

Oxygen
dislocation-controlled stable crack growth in Mo and MgO, 270

Palladium
the influence of dislocations on electrical resistivity anomalies in palladium alloys, 180
Paramagnetic centres
effects of magnetic fields on the dislocation unlocking from paramagnetic centers in non-magnetic crystals, 322
Peierls potential
a new internal friction peak and the problem on the Peierls potential in f.c.c. metals, 368
Peierls relief
the influence of Peierls relief on low-temperature plasticity of CdTe single crystals, 364
Persistent slip bands
dynamical model of the wall structure in persistent slip bands of fatigued metals
I. Dynamical model of edge dislocation walls, 295
Phase boundaries
arrangement of misfit dislocations at Ti_3Al/TiAl phae boundaries, 421
Phase transformation
changes of stacking fault sequences during the martensitic phase transformation in Cu–Zn–Al shape memory alloys, 443
Phase transitions
evolution of dislocation structure on the interfaces associated with diffusionless phase transitions, 111
Plasticity
dislocation substructures in plastically deformed AlN, 360
heterogeneous dislocation loop nucleation and free surface effects on plastic deformation: an *in situ* transmission electron microscopy study, 196
plastic deformation of single glide oriented Cu–2 to 15at.%Al crystals at elevated temperatures, 235
plastic instabilities and their relation to fracture, 35
role of the secondary slip system in a computer simulation model of the plastic behaviour of single crystals, 306
the influence of Peierls relief on low-temperature plasticity of CdTe single crystals, 364
Point defects
dislocation-point defects interaction in semiconductors and kink mobility, 346
on sequences of stable and unstable regions of flow along stress–strain curves of solid solutions—experiments on Cu–Mn polycrystals, 230
Polygonized walls
structure and mobility of the polygonized dislocation walls in high purity aluminium, 153
Portevin–Le Châtelier effect
modelling the spatiotemporal aspects of the Portevin–Le Châtelier effect, 23
the Portevin–Le Châtelier effect in Al–2.92%Mg–0.38%Mn alloy and linear location of acoustic emission, 260
Precipitates
interaction between dislocations and precipitates in an Al–Li alloy, 332
Precipitation
comparison between simulation calculations and measurements concerning athermal yielding of precipitation hardening of Cu–Co single crystals, 340
effect of precipitation on the development of dislocation substructure in low carbon steels during cold deformation, 201

Semiconductors
dislocation-point defects interaction in semiconductors and kink mobility, 346
mechanisms of dislocation motion and multiplication in ionic and semiconductor crystals, 356
Shape memory alloys
changes of stacking fault sequences during the martensitic phase transformation in Cu–Zn–Al shape memory alloys, 443
Silicon
dislocation loops at crack tips: nucleation and growth—an experimental study in silicon, 118
high temperature deformation behavior of an Al–Fe–V–Si alloy, 216
Simulations
comparison between simulation calculations and measurements concerning athermal yielding of precipitation hardening of Cu–Co single crystals, 340
Slip systems
role of the secondary slip system in a computer simulation model of the plastic behaviour of single crystals, 306
Solid solutions
on sequences of stable and unstable regions of flow along stress–strain curves of solid solutions—experiments on Cu–Mn polycrystals, 230
Solute atoms
softening of α-iron by solute nitrogen atoms investigated between 30 and 300 K by use of stress-relaxation measurements, 350
ultrasonic study of the interaction potential between a dislocation and a single solute atom, 316
Spatiotemporal effects
modelling the spatiotemporal aspects of the Portevin–Le Châtelier effect, 23
Statistical properties
low-temperature abrupt deformation processes in metals: kinetic and statistical properties observed by means of electronic response, 252
Steel
deformation mechanisms of a ferritic–martensitic steel between 290 and 870 K, 159
on the effect of nitrogen on the dislocation structure of austenitic stainless steel, 164

rheological behaviour of mild steel under monotonic loading conditions and cross-loading, 255
Steels
effect of precipitation on the development of dislocation substructure in low carbon steels during cold deformation, 201
low-energy dislocations and ductility of ferritic steels, 275
Strain
investigation of the formation of dislocation cell structures and the strain hardening of metals by computer simulation, 300
on sequences of stable and unstable regions of flow along stress–strain curves of solid solutions—experiments on Cu–Mn polycrystals, 230
Stress
internal stresses and scaling laws, 141
on sequences of stable and unstable regions of flow along stress–strain curves of solid solutions—experiments on Cu–Mn polycrystals, 230
softening of α-iron by solute nitrogen atoms investigated between 30 and 300 K by use of stress-relaxation measurements, 350
stress corrosion microcleavage in a ductile f.c.c. alloy, 266
the stress fields of edge dislocation near wedge-shaped boundaries and bonded wedges, 411
Superconductors
deformation, structure and properties of ceramics and crystals of high-T_c superconductors, 146
twins and properties of classical and high-T_c superconductors, 449

Tellurium
the influence of Peierls relief on low-temperature plasticity of CdTe single crystals, 364
Tension
dislocation cell structures in copper in torsion and tension, 170
Thermal expansion
a dislocation model for internal damping due to the thermal expansion mismatch between matrix and particles in micro-heterogeneous materials, 327
Thin films
misfit dislocations and other defects in thin films, 433
Tin
hardening and softening in Zr–Sn crystals, 246
Titanium
arrangement of misfit dislocations in Ti_3Al/TiAl phase boundaries, 421
dislocation core structures in the ordered intermetallic alloy TiAl, 391
dislocation structure in $L1_2$ long-range-ordered $Ni_3(Al,Ti)$ deformed in the temperature regime between −196 °C and 800 °C, 186
twin propagation in TiAl, 438
Torsion
dislocation cell structures in copper in torsion and tension, 170
Transformation
transformation of dislocation patterns in fatigued copper single crystals, 206
Transmission electron microscopy
heterogeneous dislocation loop nucleation and free surface effects on plastic deformation: an *in situ* transmission electron microscopy study, 196
interactions between lattice dislocatins and grain boundaries in $L1_2$ ordered compounds investigated by *in situ* transmission electron microscopy and computer modelling experiments, 415
transmission electron microscope *in situ* deformation of MC2 superalloy at room temperature, 401
Twin propagation
twin propagation in TiAl, 438
Twins
twins and properties of classical and high-T_c superconductors, 449

Vanadium
high temperature deformation behavior of an Al–Fe–V–Si alloy, 216

Wall structure
dynamical model of the wall structure in persistent slip bands of fatigued metals
I. Dynamical model of edge dislocation walls, 295
Wedges
the stress fields of edge dislocation near wedge-shaped boundaries and bonded wedges, 411
Work softening
work softening and Hall–Petch hardening in extruded mechanically alloyed alloys, 1

X-ray line profiles
dislocation distributions as seen by X-ray line profiles, 175

Yield stress
mechanisms of yield stress anomalies in beryllium and Ni_3Al, 69
observations of dislocations relevant to the anomalous yield stress in $L1_2$ alloys, 395
Yttria
dislocation activity and differences between tensile and compressive creep of yttria doped alumina, 211

Zinc
changes of stacking fault sequences during the martensitic phase transformation in Cu–Zn–Al shape memory alloys, 443
Zirconium
hardening and softening in Zr–Sn crystals, 246
